EXPLANATORY

- Amendments to this List will be effected by means of reprinted pages. Should it be necessary to add an additional page or pages to interrupt the existing sequence of page numbers, the added pages will be numbered as in the following examples, which illustrate what would happen if it became necessary (A) to extend the information on a text page beyond the limits of that page or (B) to add an illustration page between existing illustration pages. Use of the decimal notation avoids the necessity of renumbering and reprinting all pages after the newly introduced page.

Example (A)

Existing text pages	MA 5, MA 6, MA 7, etc.
Added text pages	MA 5·1, MA 5·2, MA 5·3.
Page sequence will then read	MA 5, MA 5·1, MA 5·2, MA 5·3, MA 6, etc.

Example (B)

Existing plates	A 5, A 6, A 7, etc.
Added plates	A 5·1, A 5·2, A 5·3.
Parts List will then read	A 5, A 5·1, A 5·2, A 5·3, A 6, etc.

- Where a modification to a part has taken place, or a new part issued replacing an original part, this is indicated by the inclusion of a dagger against the new or amended part.

- It will be noted that the items comprising an assembly (or sub-assembly) are offset for easy reference. This principle is followed in all Parts Lists, typical examples being given below.

Examples

Tank assembly—fuel	**NT 4982**
Cap filler	NT4668
Beam—axle—main	**NT 4972**
Bush	NT 3004

BMC Service Parts List Spine Labels

These have been designed with a colour code to enable users to file or find Parts Lists readily. The system is as follows:

Coloured rectangles at top of spine

'Families' of passenger cars will always have a common colour (e.g. Lilac for the BMC Minis).

Heavy commercial vehicles will have a common colour throughout—Red.

Light commercial vehicles will have a common colour throughout—Grey.

Second coloured rectangle

This indicates what the List deals with, as under:

Red	Mechanical.	Tan	Power Unit (Diesel).
Light Blue ...	Body.	Magenta ...	C.V. Chassis.
Brown ...	Power Unit (Petrol).	Deep Yellow ...	C.V. Body and Cab.
Pink	Engines.		

Coloured circles

These indicate the franchises covered by the list. For any particular franchise the circle will always appear at the same height on the spine label. Additionally, it will be coloured as under:

Blue	Austin.	Pink	Wolseley.
White	Morris.	Maroon	Vanden Plas.
Yellow ...	M.G.	Stone	Austin Commercial.
Grey	Riley.	Green	Morris Commercial.

Title-page

For easy identification when the list is lying flat, the colour of the text of the title-page repeats that on the spine label, indicating whether the list is Mechanical, Body, etc.

Serial Number Identification—*continued*
Models 342 and 460

TRACTOR No.—Two types of serial Identification plates were employed on models 342 and 460, examples of which are shown below

TYPE A This type of coding was used with the introduction of both 342 and 460 models and was employed on tractors bearing serial numbers 24000 to 40240.

1. Code Prefix No. This is a combination of numerals indicating the model and variation in build, for details of the code see page xiv.

2. Letter 'T' or 'B' This letter divides the code prefix from the serial number and denotes the factory of origin, e.g., 'T'=Tractor and Transmissions Branch, Birmingham. 'B'=Bathgate, Scotland.

3. Serial No. This consists of a series of numbers running consecutively and stamped on all tractors irrespective of model or variation in build.

EXAMPLE TYPE A

14B24000
- 24000 — Serial number
- B — Built at Bathgate, Scotland
- 14 — Basic 460 tractor fitted with flanged axle shafts

TYPE B This type of coding was used on models 342 and 460 and employed on tractors bearing serial numbers 40241 onwards.

1. Model Prefix No. This indicates the model in its available production form, e.g.,
42B=Basic type 342 tractor
42N=342 tractor incorporating I.P.T.O.
Note: After the letter 'B' or 'N' a number preceded by an oblique stroke will be used to indicate any significant design change e.g., 42B/1=introduction of needle roller bearing to the differential. For complete details of the prefix coding see page xv.

2. Special fitments Code This is a combination of numerals indicating the optional extras fitted to the tractor. See page xvi for the coding of the individual options, For the coding for combinations of these individual options, see pages xvii **to** xxv.

3. Serial No. This as on type A consists of a series of numbers running consecutively and stamped on all tractors irrespective of model or variation in build.

EXAMPLE TYPE B

42N/I 505 40241
- 40241 — Serial number
- 505 — Special fitments code
- I — Introduction of needle roller bearing
- 42N — 342 tractor fitted with I.P.T.O.

GEARBOX No.—The serial number of the gearbox is made up in three to five parts.

1. Code Prefix No. This is a combination of numerals indicating the variation in build and is as follows:—4010–Standard gearbox and 4013–gearbox with independent power take-off.

2. Letter 'T' or 'B' This letter divides the code prefix from the serial number and denotes the factory of origin, e.g., 'T'—Tractor and Transmissions Branch, Birmingham. 'B'—Bathgate, Scotland.

3. Serial No. This consists of a series of numbers running consecutively and stamped on all gearboxes irrespective of model or variation in build.

4. Code suffix letter 'N' or 'P' The letter 'N' denotes that the gearbox is fitted with needle-roller-bearing reverse gear and the letter 'P' denotes that the gearbox is fitted with low-ratio final drive.

EXAMPLE

4013 B 27025 NP
- NP — Needle-roller-bearing reverse gear and low ratio final drive
- 27025 — Serial number
- B — Built at Bathgate, Scotland
- 4013 — Fitted with I.P.T.O. unit

HYDRAULIC UNIT No. (HU)—The serial number is made up in three parts.

1. Code Prefix No. This number indicates the (P.S.I.) pounds-per-square-inch and is stamped on all hydraulic units.

2. Letter 'U' This letter divides the code prefix from the serial numbers and denotes the unit is unified threaded.

3. Serial No. This consists of a series of numbers running consecutively and stamped on all units irrespective of Model.

EXAMPLE

2000 U 50201

Serial number
Unified threads
2000 lb./sq./in unit

BELT PULLEY UNIT No. (BP)—The serial number of the belt pulley is made up in two parts.

42N = 10/42 tractor incorporating I.P.T.O.

Note: After the letter 'B' or 'N' a number preceded by an oblique stroke will be used to indicate any significant design change, e.g., 42B/4 = introduction of 10-speed gearbox. For complete details of prefix coding see page xv.

2. Special fitments Code This is a combination of numerals indicating the optional extras fitted to the tractor. See page xvi for the coding of the individual options. For the coding for combinations of these individual options, see pages xvii to xxv.

3. Serial No. This consists of a series of numbers running consecutively and stamped on all tractors irrespective of model or variation in build.

EXAMPLE
